13.12.2020	nyb	Initial creation

2 Summary

To be able to use Wordpress (further named as WP) as backend for mobile applications the user management must be simplified to be based upon REST requests only. There is no web usage planned!

The current used plugin “WP REST User” (https://wordpress.org/plugins/wp-rest-user) does not offer user confirmation process or password lost by a two-factor authentication (2nd is e-mail).

3 Project defaults

Wordpress	Version 5.6 (native and fresh installed, no additional plugins!)
Language	English only (including documentations, remarks or further code descriptions).

3.1 Code defaults

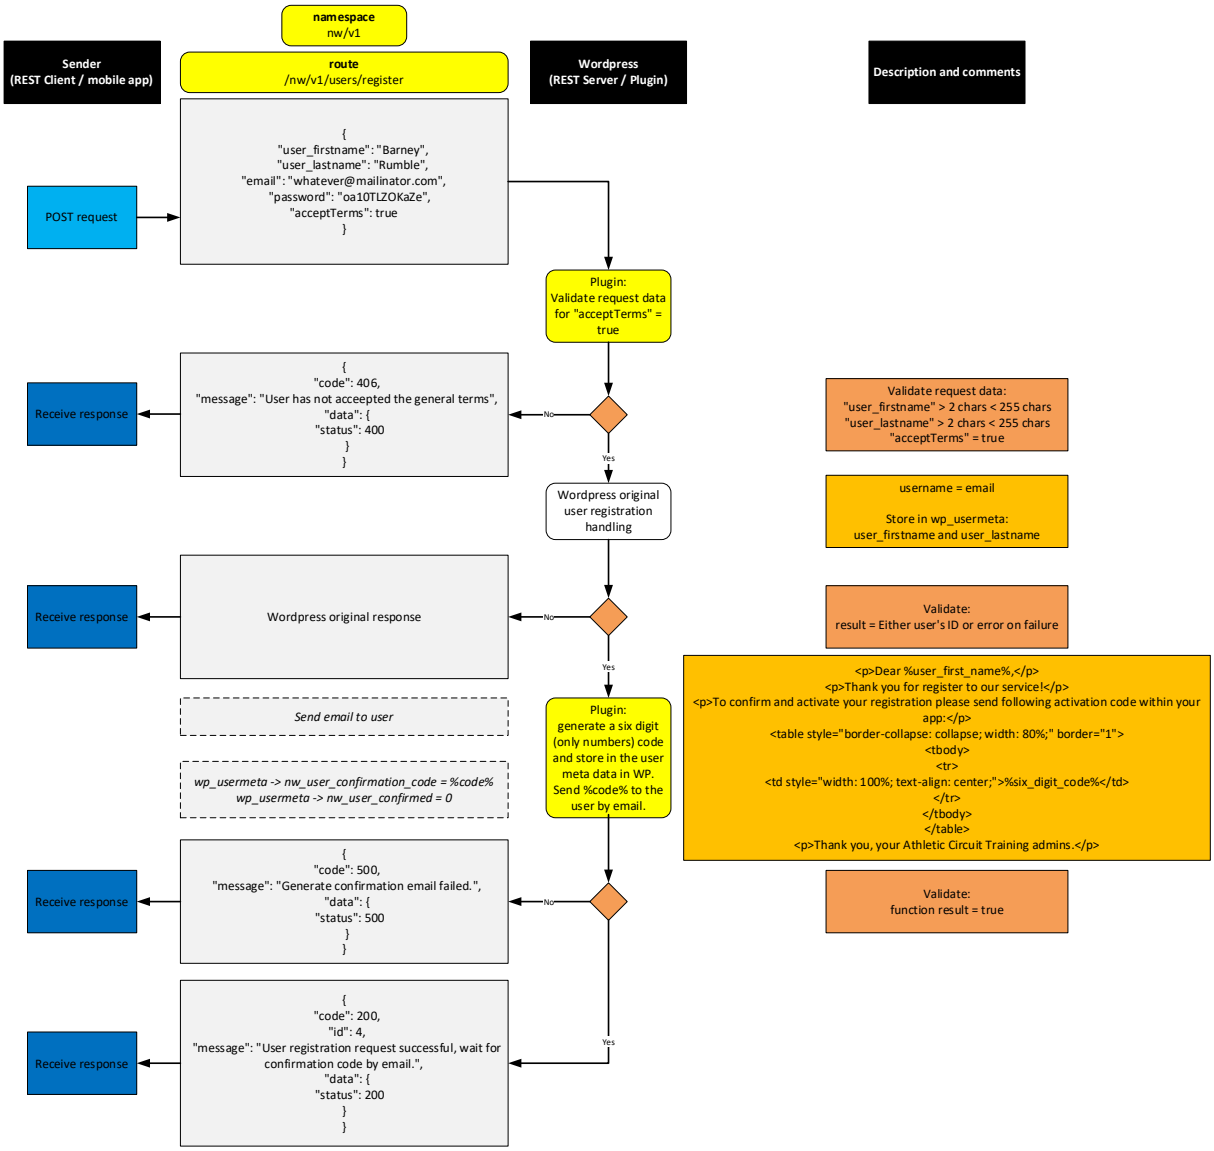
Code/License	Commercial and non-commercial must be allowed without any need of public notice. No GPL or similar code/license!
Dependencies	No dependencies allowed. Neither to plugins nor external frameworks or tools.
Code exchange	With github.com (https://github.com/n-ice-ch/wpRestUserManagement). Each developer is responsible for managing his account at github.com. Project owner will set permissions when requested.

3.2 REST defaults

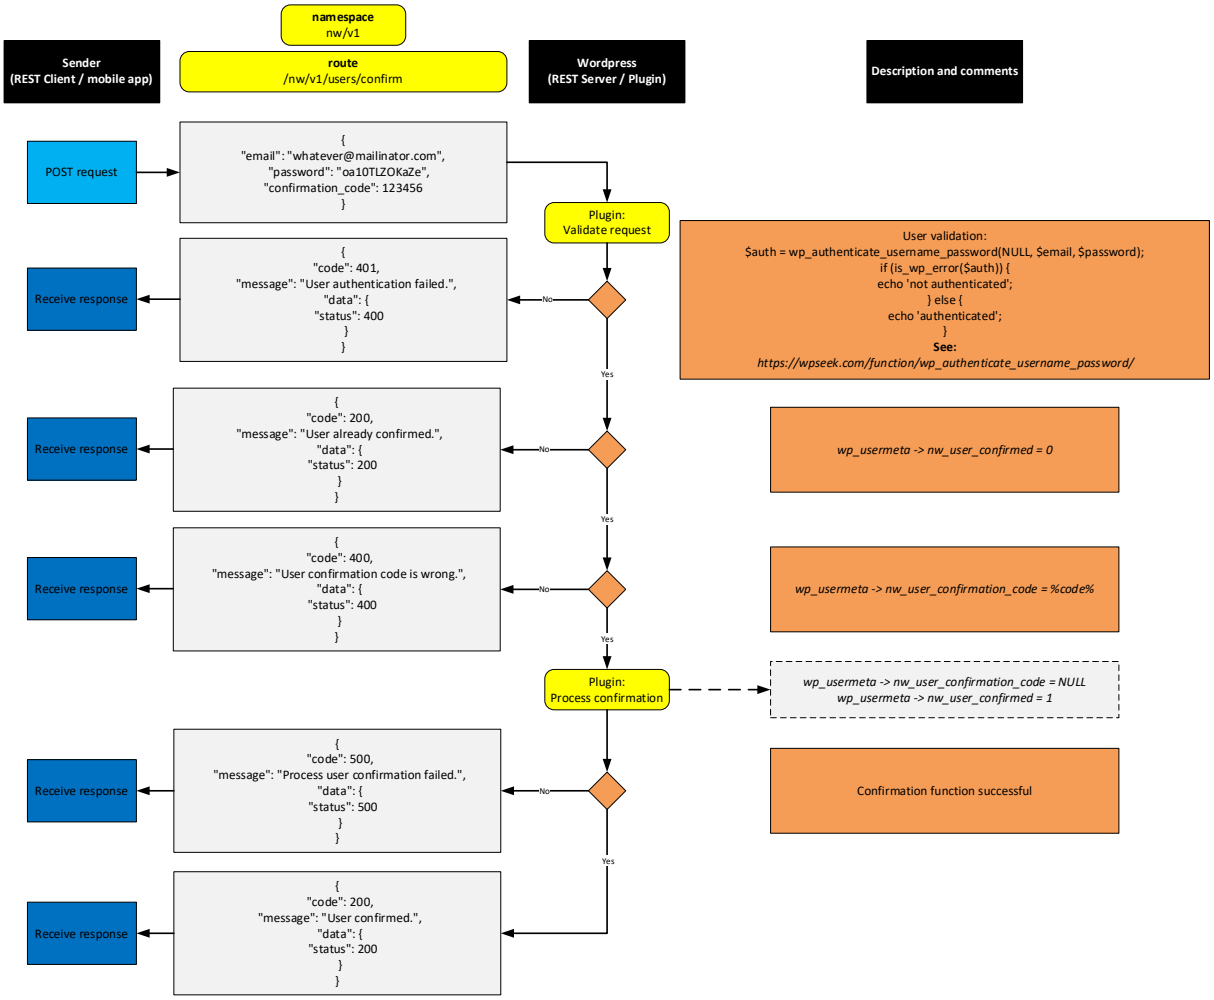
Namespace	nw/v1

4 REST routes

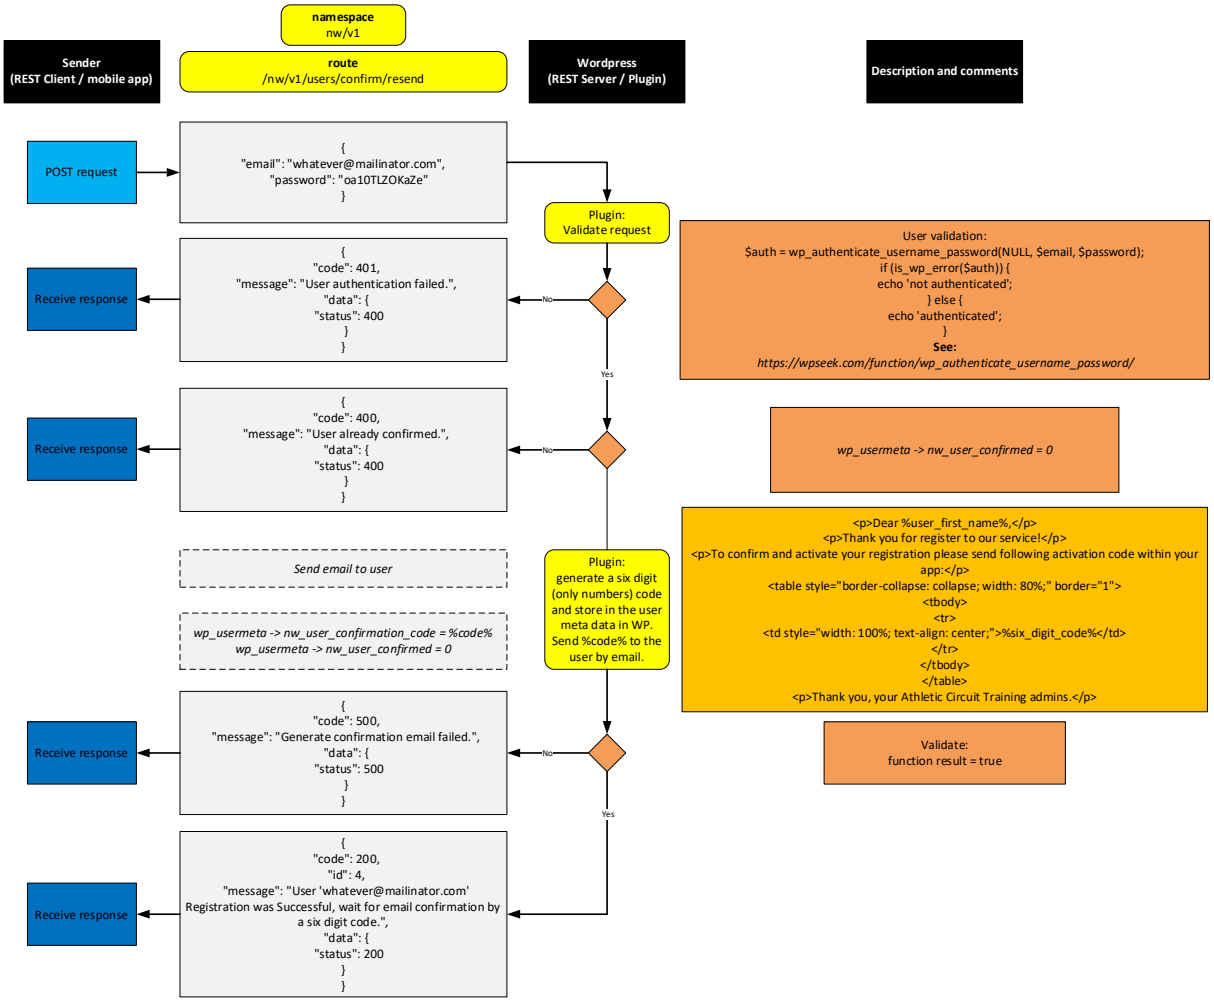
4.1 users/register



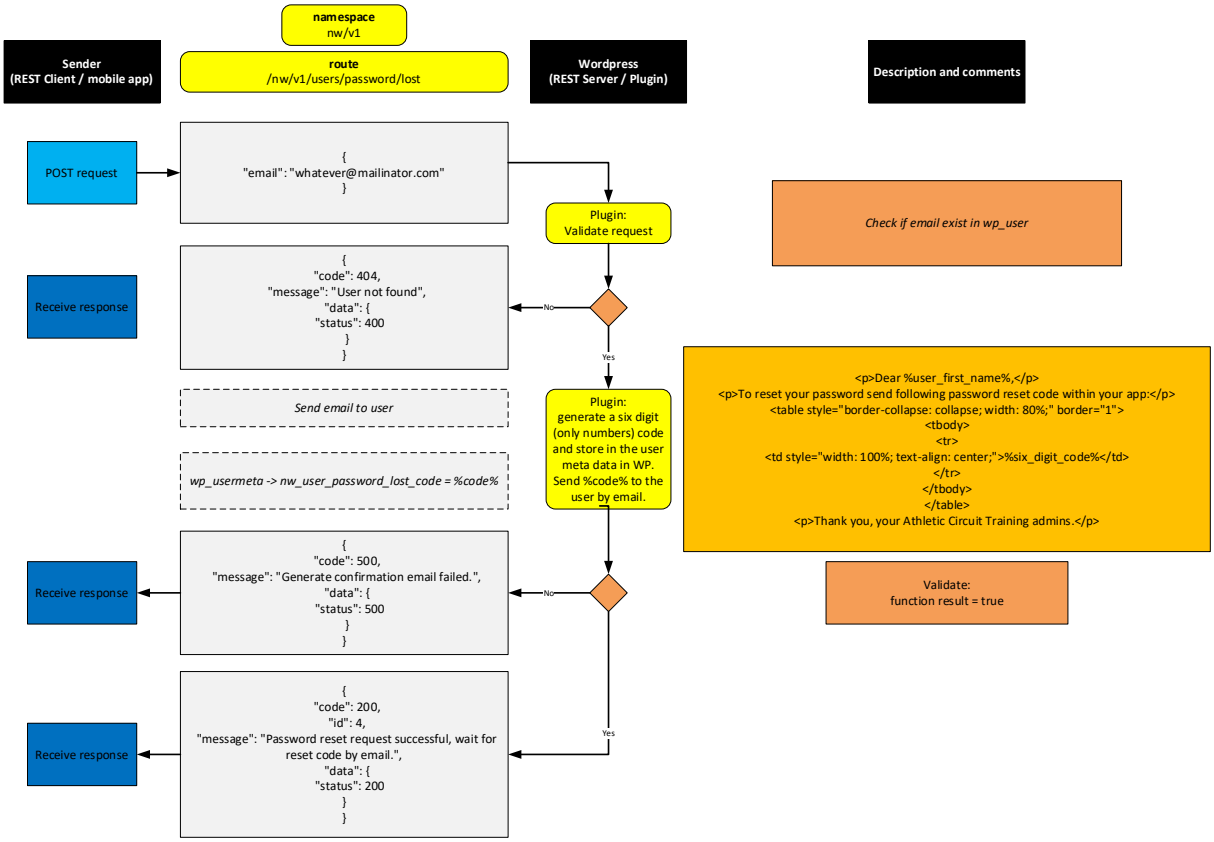
4.2 users/confirm

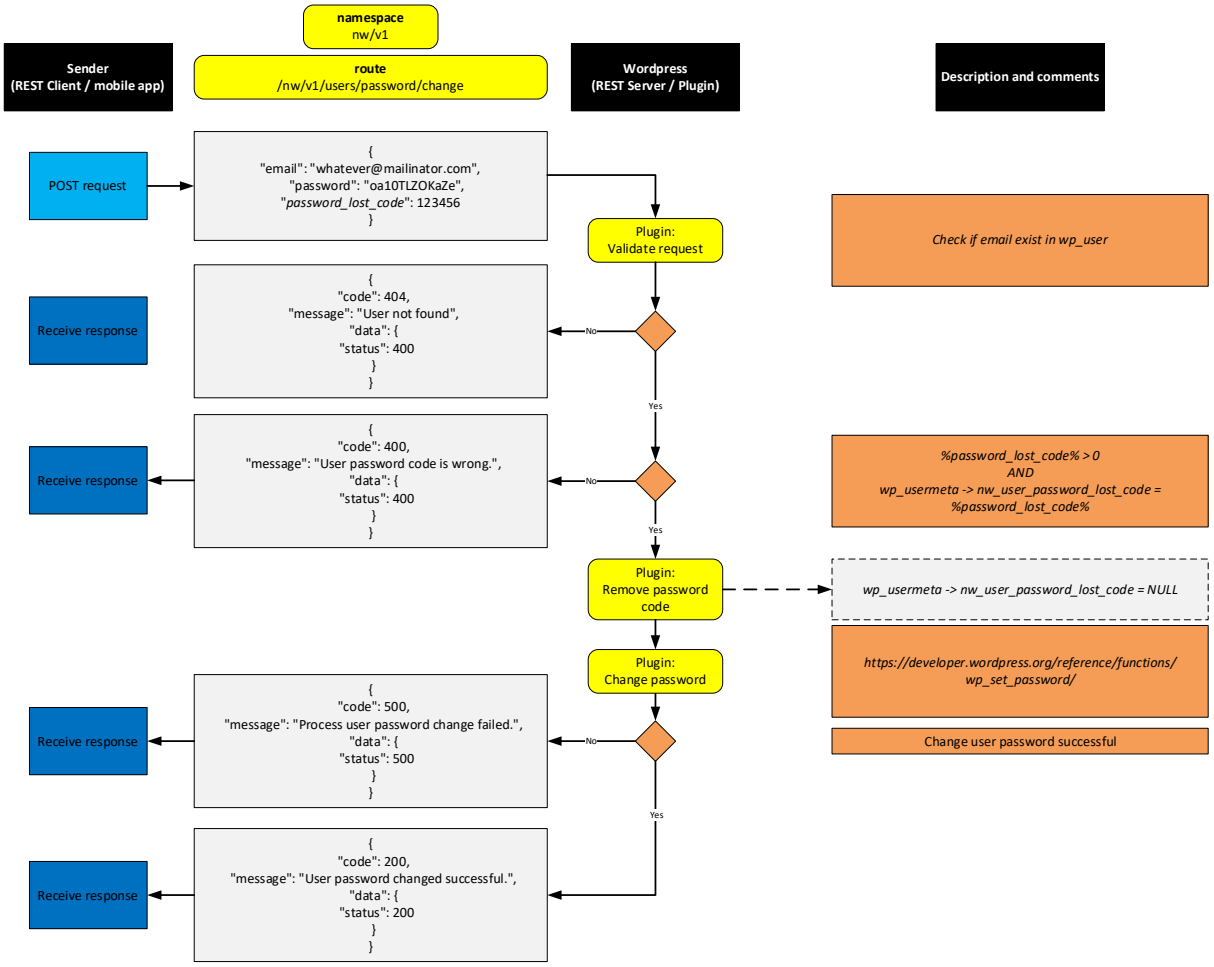


4.3 users/confirm/resend



4.4 users/password/lost





4.5 users/password/change
